

LESSON NOTES

Unstructured Notes Template

Subject:	Computer Networks
Topic:	OSI 7-Layer Architecture & Protocols
Teacher:	[Teacher Name]
Date:	[MM/DD/YYYY]
Grade / Section:	[Grade / Section]

LEARNING OBJECTIVES

- [e.g., Identify the function of each OSI layer]
- [e.g., Differentiate TCP from UDP]
- [e.g., Explain how routers and switches operate within the OSI model]

KEY DEFINITIONS & PRINCIPLES

- **Physical Layer:** Transmits raw bit streams across physical cables and wireless frequencies.
- **Data Link Layer:** Handles MAC physical addressing, frame encapsulation, and switch operations.
- **Network Layer:** Responsible for IP logical addressing, packet routing, and router decisions.
- **Transport Layer:** Manages segmentation, port multiplexing, and reliable TCP/UDP connections.

CORE RULES & FACTS

- Routers operate at Layer 3; standard network switches operate at Layer 2.
- TCP ensures reliable ordered delivery; UDP provides connectionless fast streaming.

DIAGRAM / ILLUSTRATION

[Space for OSI model diagram, table, or illustration]
